

The LINK interagency video sharing service is now available through the TOPS Laboratory

19 July 2006

The WisDOT Public Safety Information Service (LINK) has been moved to the TOPS Laboratory WisTransPortal system. The LINK service can now be accessed by going to <http://transportal.cee.wisc.edu/video/>. LINK users are able to login to the system using their previous accounts.

The LINK project was originally developed by TransCore with a primary goal of increasing safety by providing traffic information to public safety agencies. LINK accomplishes this goal by providing real-time traffic video, travel time information, and incident reports for southeast Wisconsin to public safety agencies via the internet. The LINK project began in the Milwaukee area, but an expansion to the Madison area is in the project plan.

As TOPS Lab staff continues to integrate the LINK service into the WisTransPortal system, some maintenance activities will occur. All scheduled maintenance activities will be posted at <http://transportal.cee.wisc.edu/video/>. For assistance with the new LINK site, contact Steven Parker at (608) 265-4921 or email: wisdotvideo@topslab.wisc.edu.
